

E-SPIR changes, for Advisor versions 7.0.x

| | Enhancements for Advisor SPIR program 7.0.2 | Implications for Users |
|-----|---|---|
| 1. | Automatic generation of Spare parts codes has been introduced. - Existing codes in the system will be checked. - Program allows different coding ranges per project. - Program allows fixed last digit for e.g. MESC coding | In project often temporary coding is required for initial purchasing. |
| 2. | Mandatory entry fields have been coloured blue in both Supplier and Advisor programs. | For suppliers mainly |
| 3. | Allow import of Vista Excel .xlsx files | In line with Vista technology. |
| 4. | The mouse cursor will be on the imported SPIR after importing a Supplier or Advisor SPIR | Helps user to find the latest imported SPIR |
| 5. | Advisor Article No has been added on the FIND results screen | Requested by Users |
| 6. | Option added to open complete SPIR with arrow → button | Requested by Users |
| 7. | Functionality added to allow bulk updates on drawing numbers for large quantities of numbers or major SPIRs. | Helps review specialists to update drawing numbers efficiently. |
| 8. | Number of items (spare parts) per SPIR has been added on the project report | Requested by Users |
| 9. | The export-import functionality for Spare Parts information will allow importing Material Groups and Spare Parts Indicators. | Will increase efficiency to prepare SPIRs for SAP for large quantities |
| 10. | The option has been created to select required fields for Code Screen in the Administrator Menu. Supplier Spare part number fields have been added. | Requested by Users |
| 11. | On the merge screen for duplicate items, a column with the order quantity of spare parts has been added. | Helps user to decide on order quantities. |
| | Enhancements for Advisor SPIR program 7.0.1 | Implications for Users |
| 12. | A new installation procedure was configured for users experiencing problems with the windows installer. If your version 7.0.0 runs without problems, there is no need to install version 7.0.1. | On request of users |
| | Enhancements for Advisor SPIR program 7.0.0 | Implications for Users |
| 13. | Import facility created for Object Type and Object type text. This code is used in SAP (Shell) to identify the equipment | On request of users |
| 14. | The object type can be linked to the equipment quoted on the Equipment screen and be added to the BoM Title (see under 3). | On request of users |
| 15. | The BoM title can be populated semi-automatically similarly as the short spare parts description for the SAP BoM list. Buttons allowing this facility on the BoM Title screen can be configured. | Efficient facility to create SAP BoM titles |
| 16. | The sequence of the export fields of the Advisor SPIR of version 7 has been made compatible again with the sequence of the export file of version 5. New fields have been added at the end of each export line. In version 6 this sequence was changed compared with the sequence of version 5. | To facilitate uploads to ERP systems already developed for previous versions. |
